List of airmail distances

2022 Edition

International Bureau of the Universal Postal Union

Preface

1 List of airmail distances¹

The airmail distance² is the distance used for calculating payments for the air conveyance of mail.

2 Contents of the List

- Part I: International airmail distances (for distances not appearing in this non-exhaustive list, please see “Calculation of airmail distances” below)
- Part II: Domestic airmail distances of countries that currently provide internal air conveyance (IAC) and claim IAC dues

3 Great-circle distance

The great-circle distance is the distance of the arc of such a circle between two points on the surface of the earth.

4 Calculation of airmail distances

The calculation of the airmail distance between two points served by a line is established on the basis of the great-circle distance plus 2,5% to cover intermediate stops. The rate of increase represents the difference, for the whole route, between the great-circle distance from end to end and the sum of the great-circle distance from stop to stop on the shortest line. The distance thus obtained is rounded up to the nearest hundred when the last two figures are equal to or exceed 50.

Example:

Great circle distance between FRA (Frankfurt-am-Main Airport, Germany) and CWB (Curitiba Airport, Brazil) = 10'117 km

Multiply $10'117 \times 1.025$ (2.5%) = 10'369.925 km

Round up to the nearest hundred = 10'400 km

Airmail distance between FRA and CWB = 10'400 km

5 Practical information

The cities in which the airports of origin of the routes are located are listed in alphabetical order; after each of them, the termini of these routes are also listed in alphabetical order. In accordance with standard international commercial aviation language, the names of the cities are spelt in English

¹ Nothing in the method of presentation of the information appearing in this publication or in the arrangement of the data should be regarded as the adoption of a position by the UPU with respect to the situation and borders of the countries and territories.

Part I – International airmail distances (non exhaustive list)
